1. A data says that despite the advancement of technologies today, pollution of water bodies by public and industrial wastes causes a loss of three percent of GDP annually.
2.Water saving methods Use water sparingly for washing clothes, bathing
Used water can be recycled and used for plants and trees. The absolute goal can only be achieved if the public follows water conservation measures. It is noteworthy that in February 2025, the Central Pollution Control Board Office and the Prime Minister's Office wrote a letter regarding water pollution and awareness and the Prime Minister's Office welcomed it.
3. Farm Short Green Forest Project Length 100ft Width 50ft 5ft Depth Amid severe challenges on rocky ground without any natural fertilizers for Mia Waki Forests

A program developed as a competitive new venture. It helps to raise the ground water level and promotes biodiversity. Through this scheme, a 450-feet deep bore well gets water for 3 hours during summers, but a neighboring farmer gets water for only one hour from a 1,000-feet bore well.
4. Everything has technology, there is no technology to create water.Next to education, children should be taught about the conservation of water and trees to help protect future generations.
